WHAT IS CLAIMED IS:

5

10

15

20

25 .

- 1. A gas meter valve for connection to a meter outlet of a gas meter, the gas meter valve comprising:
 - a valve inlet coupleable to the meter outlet and adapted to communicate gas from the meter outlet;
 - a valve outlet coupleable to piping for supplying gas to a customer and adapted to communicate gas to the piping;
 - a valve body coupled to the valve inlet and the valve outlet, the valve body including:
 - a chamber for communicating gas from the valve inlet to the valve outlet; and
 - a valve assembly disposed at least partially in the chamber and adapted to:

prevent the communication of gas through the chamber when the valve assembly is in a first position; and

permit the communication of gas through the chamber when the valve assembly is in a second position; and

an actuating mechanism operably coupled to the valve assembly and adapted to position the valve assembly in the first position and the second position.

- 2. The gas meter valve of Claim 1, wherein the valve outlet includes a threaded inner surface and a bushing having a threaded outer surface and threaded inner surface, the threaded outer surface of the bushing adapted to receive the threaded inner surface of the valve outlet and the threaded inner surface of the bushing adapted to receive a threaded outer surface of the piping for supplying gas to the customer.
- 3. The gas meter valve of Claim 1, wherein the actuating mechanism includes a keyed receptacle operable to receive a tool for manipulating a position of the actuating mechanism.
 - 4. The gas meter valve of Claim 1, wherein the actuating mechanism includes a manually operable flange mounted on an exterior of the valve body.
- valve body further includes an opening extending through a portion of the valve body and the actuating mechanism further includes an opening extending through a portion of the actuating mechanism such that the opening through the portion of the actuating mechanism is at least partially aligned with the opening through the portion of the valve body when the actuating mechanism is operated to position the valve assembly in the first position.

- 6. The gas meter valve of Claim 5, wherein the opening through the portion of the valve body and the opening of the portion of the actuating mechanism are adapted to receive a tamper-proofing mechanism extendable through the openings to prevent the actuating mechanism from being operated to position the valve assembly in the second position.
- 7. The gas meter valve of Claim 1, wherein the valve assembly includes a ball valve assembly.
 - 8. The gas meter valve of Claim 1, wherein the valve assembly includes a soft seat valve assembly.
- 9. The gas meter valve of Claim 1, wherein the valve inlet includes a swivel and swivel nut for coupling the valve inlet to the meter outlet.
- 10. The gas meter valve of Claim 1, wherein the
 valve inlet, valve outlet and valve body are arranged so
 as to replace an existing piping portion provided between
 the meter outlet of the gas meter and the piping for
 supplying gas to the customer.
- 25
 11. The gas meter valve of Claim 1, wherein a connection of the valve inlet to the valve body is substantially perpendicular to a connection of the valve outlet to the valve body.

12.	Α	σas	supply	svstem	comprising:

a gas meter having a meter inlet for receiving a gas supply and a meter outlet for providing the gas supply; and

a valve including:

5

15

20

25

30

- a valve inlet coupled to the meter outlet and adapted to communicate gas from the meter outlet;
- a valve outlet coupled to piping for supplying gas to a customer and adapted to communicate gas to the piping;
- a valve body coupled to the valve inlet and the valve outlet, the valve body including:
 - a chamber for communicating gas from the valve inlet to the valve outlet; and a valve assembly disposed at least

partially in the chamber and adapted to:

prevent the communication of gas
through the chamber when the
valve assembly is in a first
position; and

permit the communication of gas
through the chamber when the
valve assembly is in a second
position; and

an actuating mechanism operably coupled to the valve assembly and adapted to position the valve assembly in the first position and he second position.

- 13. The gas supply system of Claim 12, wherein the valve outlet includes a threaded inner surface and a bushing having a threaded outer surface and threaded inner surface, the threaded outer surface of the bushing adapted to receive the threaded inner surface of the valve outlet and the threaded inner surface of the bushing adapted to receive a threaded outer surface of the piping for supplying gas to the customer.
- 14. The gas supply system of Claim 12, wherein the actuating mechanism includes a keyed receptacle operable to receive a tool for manipulating a position of the actuating mechanism.
- 15. The gas supply system of Claim 12, wherein the actuating mechanism includes a manually operable flange mounted on an exterior of the valve body.
- valve body further includes an opening extending through a portion of the valve body and the actuating mechanism further includes an opening extending through a portion of the actuating mechanism such that the opening through the portion of the actuating mechanism is at least partially aligned with the opening through the valve body when the actuating mechanism is operated to position the valve assembly in the first position.

- 17. The gas supply system of Claim 16, wherein the opening through the portion of the valve body and the opening of the portion of the actuating mechanism are adapted to receive a tamper-proofing mechanism extendable through the openings to prevent the actuating mechanism from being operated to position the valve assembly in the second position.
- 18. The gas supply system of Claim 12, wherein the valve assembly includes a ball valve assembly.
 - 19. The gas supply system of Claim 12, wherein the valve assembly includes a soft seat valve assembly.
- 15 20. The gas supply system of Claim 12, wherein the valve inlet includes a swivel and swivel nut for coupling the valve inlet to the meter outlet.
- 21. The gas supply system of Claim 12, wherein a connection of the valve inlet to the valve body is substantially perpendicular to a connection of the valve outlet to the valve body.

22. In a gas supply system comprising a gas meter having a meter outlet, a first piping portion operably coupled to the meter outlet and a second piping portion operably coupled to the first piping portion, a method for shutting off a gas supply to a customer while maintaining a gas supply to the gas meter, the method comprising the steps of:

disconnecting the first piping portion from the gas meter and the second piping portion;

10 providing a gas meter valve comprising:

- a valve inlet coupleable to the meter outlet
 and adapted to communicate gas from the
 meter outlet;
- a valve outlet coupleable to piping for supplying gas to a customer and adapted to communicate gas to the second piping portion;
- a valve body coupled to the valve inlet and the valve outlet, the valve body including:
 - a chamber for communicating gas from the valve inlet to the valve outlet; and a valve assembly disposed at least

partially in the chamber and adapted to:

prevent the communication of gas
through the chamber when the
valve assembly is in a first
position; and

permit the communication of gas
through the chamber when the
valve assembly is in a second
position; and

15

5

25

an actuating mechanism operably coupled to the valve assembly and adapted to position the valve assembly in the first position and the second position;

connecting the valve inlet to the meter outlet; connecting the valve outlet to the second piping portion; and

operating the actuating mechanism to position the valve assembly in the first position to prevent a flow of gas from the meter outlet to the second piping portion.

- 23. The method of Claim 22, further comprising the steps of:
- detecting a leak in the second piping portion;
 dispatching a gas system technician to operate the
 actuating mechanism to position the valve in
 the first position;
- repairing the leak in the second piping portion; and
 dispatching an authorized repair technician to
 operate the actuating mechanism to position the
 valve in the second position.
 - 24. The method of Claim 22, wherein the first piping portion includes a riser coupled to the meter outlet, an elbow having an inlet coupled to the riser and an outlet coupled to the second piping portion.
- 25. The method of Claim 24, wherein an angle of a bend of the elbow is substantially 90°.

26. The method of Claim 22, wherein the valve inlet includes a swivel and swivel nut for coupling the valve inlet to the meter outlet.
